

Damian Crosby March 27, 2023

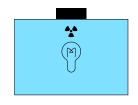

Revision History

Revision	Date	Author(s)	Description
1.0 1.01	2018-04-29 2019-05-07	Damian Crosby Damian Crosby	Creation. Added clarification on DVI output, added clarification that multi- ple class symbols are found in multi.
1.02	2020-03-15	Damian Crosby	Fixed scaling and placement errors in the speed leader key code, added note to define scale first in manual when using speed leader, fixed compilation issues in landgroup and landheadqurters to account for updated xparse package, fixed issue with frame status and scale keys not always being updated between commands, changed datestamps to be ISO 8601 compliant as per CTAN request.
1.03	2023-03-27	Damian Crosby	Hotfix to remove deprecated use of the shapes. Symbols TikZ library alias (now only case-sensitive shapes. symbols is permitted).

Acknowledgments

The author would particularly like to thank the following members of the T_EX stack exchange community for their solutions to problems during this package's development:

- cfr
- Kpym
- Torbjørn T.
- Ulrike Fischer

1 Introduction

1.1 Package Summary

This package allows for the drawing of symbols from the NATO Joint Military Symbology library, as detailed in the document APP6-(C). It is designed to replicate the "building block" nature of the symbols in its command syntax using pgf keys, allowing the user to generate the entire symbol, including additional text fields, in one compact command.

1.2 Package Dependencies

The MilSymb package uses the following packages as dependencies:

- tikz
- fontenc
- fix-cm
- arevmath
- marvosym
- acronym
- amssymb
- xifthen
- xparse

1.3 Using MilSymb

To use **MilSymb** in your document, just include \usepackage{milsymb} in your preamble. **MilSymb** has only been tested on \(\mathbb{L}\mathbb{E}\mathbb{Z}\), other TeX flavours will probably not work. All **MilSymb** symbols must be placed inside a TikZ environment, either as part of an inline tikz command or an tikzpicture enviroment. As with other packages that use TikZ or other postscript based drawing programs, DVI format is not directly supported, though some DVI viewers are able to display TikZ images by embedding postscript.

1.3.1 Package Options

Currently, there are no package options specified for MilSymb.

1.3.2 Symbol Construction

NATO Joint Military Symbology uses a "building block" philosophy when constructing military symbols, so each symbol can be broken into individual components. Only a brief overview will be given here, more information can be found in APP6-(C). These components are shown in Figure 1.

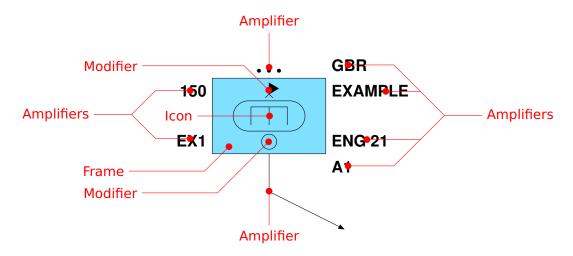

Figure 1: Annotation of symbol components.

- The **Frame** consists of a filled shape encompassing the icon and modifiers, denoting the type (land, sea surface, air, etc.) and faction (friendly, hostile, neutral, unknown) of the symbol. In some situations this is optional.
- The **Icon** denotes the entity the symbol represents (infantry, tank, mine, etc.). It is always placed in the centre of the symbol.
- The **Modifiers** are symbols that go above and below the icon (or to the left and right in the case of missile symbols, and just below the frame in the case of equipment symbols). These "modify" the entity with additional features or information (equipped with rocket launchers, extra heavy, etc.) These are usually optional.
- The **Amplifiers** are text and symbols that go outside the frame, and denote additional attributes of the symbol (country of origin, military echelon, speed and direction, etc.). These are always optional.

2 Symbol Commands

2.1 General Command Structure

The general structure of a MilSymb command is as follows. Syntax in *italics* is optional:

\command[key, key=value](location)(name){label}

- command is the name of the command. All are prefixed with Mil-, and end with Air, Missile, Land, Equipment, Installation, SeaSurface, SeaSubsurface, Mine, Space, Debris and Activity. These mostly correspond to the categories found in APP6-(C), except for Missile, Mine and Debris, which have been broken off from Air, SeaSubsurface and Space for convenience. The OwnShip command is an exception to this rule, and does not have the Milprefix.
- key and key=value are the options used to build the symbol, such as faction, icons, modifiers, and amplifiers. Keys with no value define boolean switches, such as unclear. Keys with values can have one parameter, such as faction, or two parameters, such as speed leader. In the latter case, the syntax is key={value1}{value2}.
- location is an optional coordinate or coordinate reference to place the symbol. This is generally needed when placing multiple symbols in one tikzpicture.
- name is an optional reference label that acts just like the name property of a node in TikZ. It exposes standard rectangle node anchors such as north and south, allowing connectors to be drawn between symbols. This is useful when drawing organisation charts and similar (see Example 28).
- label is an optional text label that is added to the right of the symbol.

2.1.1 Shared Keys

These are all the keys that are shared by multiple **MilSymb** commands. Not all keys are shared by all commands, please see Table 2 for details about which keys are used by which commands.

		Shared Key										
Command	faction	main	upper	lower	frame status	monochrome	scale	no frame	speed leader	offset, movement	feint or dummy	headquarters
MilAir												
MilMissile												
MilLand												2
MilEquipment					1							
MilInstallation												2
MilSeaSurface												
MilSeaSubSurface												
MilMine					1							
MilSpace												
MilActivity												
MilDebris												
0wnShip												

¹Not functional when the no frame option is used.

Table 2: Table of which keys are used in which commands.

- **2.1.1.1 main** This key defines the icon to use in the centre of the frame. See the individual command icon and modifier tables for the list of available values.
- **2.1.1.2 upper** This key defines the modifier to use above the icon defined by main. See the individual command icon and modifier tables for the list of available values.
- **2.1.1.3 lower** This key defines the modifier to use below the icon defined by main. See the individual command icon and modifier tables for the list of available values.
- **2.1.1.4** frame status This key modifies the border of the frame to allow for the expression of both the full set of "standard identities", and the planned status as seen in APP6-(C). The unclear value creates a black and white dotted line to display the alternate identities of each faction (assumed friend for friendly, suspect for hostile and pending for unknown, neutral should not use this value). The anticipated value create a longer dashed line to display the planned status. If the frame status key is not set, a standard solid border is used.

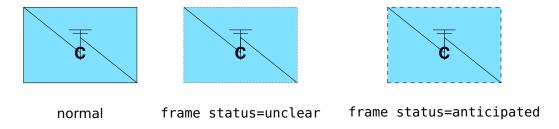

Figure 2: Example of the frame status key in use.

2.1.1.5 faction This key selects the military faction of the symbol relative to the user, which determines the colour and shape of the frame, or the colour of the icon and modifiers if no frame is specified. The values available are friendly, hostile, neutral and unknown.

²Only functional when faction=friendly.

Command	Faction Frame							
Command	Friendly	Hostile	Neutral	Unknown				
MilAir + MilMissile								
MilLand								
MilEquipment* + MilSeaSurface								
MilInstallation	_							
MilSeaSubsurface + MilMine*								
MilSpace								
MilActivity								

^{*}Can be used without a frame using the no frame option.

Table 3: Table of all the **MilSymb** command frames.

2.1.1.6 monochrome This boolean switch key allows the symbol to be generated in a monochrome format. All faction colours are instead rendered as an off-white colour as specified in APP6-(C).

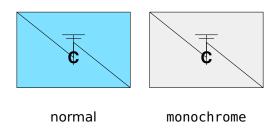

Figure 3: Example of the monochrome key in use.

2.1.1.7 scale This key allows you to scale the resulting symbol by a multiple. By default (scale=1) the boundary octagon is precisely 1cm in diameter.

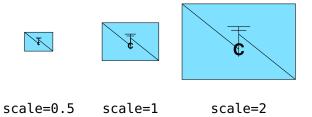

Figure 4: Example of the scale key in use.

2.1.1.8 no frame This boolean switch key allows for specific commands (namely MilEquipment and MilMine) to be used without a faction frame. Instead, the icon and modifiers are recoloured with a fluorescent version of the faction colour, as per APP6-(C).

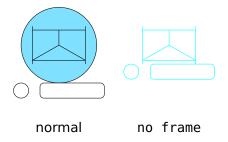

Figure 5: Example of the no frame key in use.

2.1.1.9 speed leader (Amplifier) This key draws a line from the centre of the symbol at a specified heading for a specified length. This is used to denote the speed (length) and direction (heading) of the symbol. This key takes two arguments, the first is the length and the second is the heading, as shown below:

speed leader={heading}{length}

When using this key along with the scale key, the scale key should be defined first. This is because the speed leader key immediately executes code that uses the scale key.

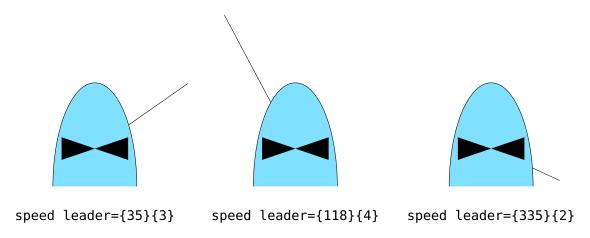

Figure 6: Example of the speed leader key in use.

2.1.1.10 offset, movement (Amplifier) This key draws a "leader line" down from the centre of the symbol, then another to a specified position *offset* from the centre of the symbol. The offset key should be used to denote precise location, and the movement key should be used to indicate direction of movement (in the case of the movement key, the line is tipped by an arrow). They should not be used simultaneously. This key takes two arguments, each enclosed in curly braces, the first is the length of the "leader line" extending below the symbol, then the second is a pair of TikZ coordinates (with no brackets) indicating the specified position *offset* from the centre of the symbol,

as shown below:

offset={leader length}{offset}
movement={leader length}{offset}

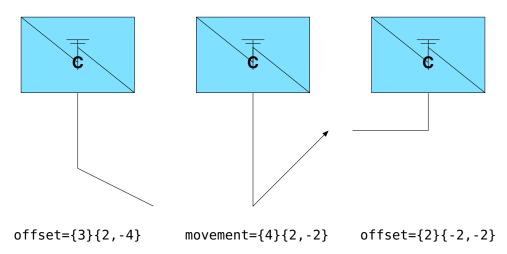

Figure 7: Example of the offset and movement key in use.

2.1.1.11 feint or dummy (Amplifier) This boolean switch key draws the *feint or dummy* amplifier on the symbol. See APP6-(C) for further information about its use.

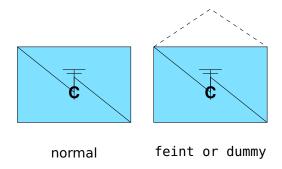

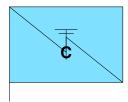

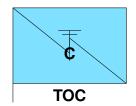

Figure 8: Example of the feint or dummy key in use.

2.1.1.12 headquarters (Amplifier) This key draws a line down from the south east corner of a friendly MilLand or MilInstallation frame, and then an optional text field below the frame. This is used to denote if the symbol is stationed at a headquarters or some other kind of military base. The key can be provided with no value, which will produce a blank headquaters amplifer, which is a line drawn downwards from the south-west of the symbol frame, or with a set of values that insert acronyms next to the line. Table 4 lists all the options available.

Value	Acronym
assault command post	ASLT
command group	CMD
forward command post	FWD
main command post	MAIN
rear command post	REAR
tactical operations centre	TOC
tactical command post	TAC

Table 4: Headquarters acronyms.

headquarters (no value) headquarters=tactical operations centre

Figure 9: Example of the headquarters key in use.

2.1.2 Text Fields

Most **MilSymb** commands (apart from **MilDebris** and **OwnShip**) have a set of text amplifiers that go around the edge of the symbol. These are set by individually named keys specified in the **Text Fields** subheading of each command entry. Some symbols have multiple text fields in the same location, be default no spaces are inserted between these fields, so spaces must be entered manually as appropriate.

2.1.3 Full Frame Icons

In some commands (Milland, Millnstallation and MilActivity) some icons (as set by main) will take up the entire frame. These are referred to as "full frame" icons. Modifiers (as set by upper and lower) should not be used when a full frame icon has been selected.

2.1.4 Grouping

For **Milland** and **MilInstallation** symbols with the faction key set to friendly, there is the option to group several commands together to indicate several entities in one location. **MilSymb** provides two $mathbb{MT}_E
mathbb{X}$ environments to achieve this, **landgroup** and **landheadquarters**. **landgroup** is designed to be used with normal **Milland** symbols, and **landheadquarters** is designed to be used with symbols that have a headquarters amplifier. Within the environments, each command should be the argument inside an \item{...} command (note that it is not the same as the \item that is used in bulleted and numbered lists in $mathbb{MT}_E
mathbb{X}
mathbb{X}
mathbb{N}
mathbb{MI}
mathbb{N}
mathbb{M}
mathbb{N}
m$

\begin{landgroup}[scale=2]
\item{\MilLand[faction=friendly,
main=signal radio teletype centre,
echelon=section]}
\item{\MilLand[faction=friendly,
main=diving,
upper=video imagery,
echelon=brigade,
status=reduced]}
\item{\MilLand[faction=friendly,
main=sensor,
upper=large extension node,
lower=single channel]}
\end{landgroup}

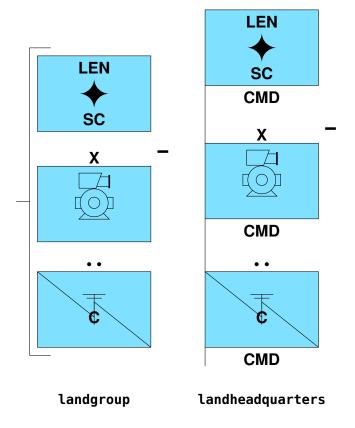

Figure 10: Example of landgroup and landheadquarters grouping.

2.2 Air Command (MilAir)

This command covers symbols for air assets and their activities. Refer to *Chapter 2, Section 2 and 3* in APP6-(C) for further information.

Table 7: Table for lower values in the MilAir command.

2.2.2 Amplifiers

2.2.2.1 Text Fields MilAir has 5 text field amplifiers, as shown in Figure 11. Table 9 gives the key and description of each field, along with the standard prefixes to use. This table is mostly identical to the one found in APP6-(C).

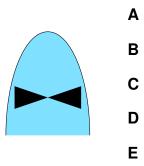

Figure 11: Location of ${\bf MilAir}$ text field amplifiers.

Location	Key	Description	Prefix*
Α	track number	System Track Number.	TN
В	call sign	Airframe Number or Mission Call Sign.	
С	position and movement	Course [degrees]/Speed [knots] or Bearing [degrees]/Distance [nautical miles] Height [feet/flight level].	C/S, B/D
D	nation	Nation's Name: A 3-letter code indicating the object's country of origin (STANAG 1059).	
E	additional information	For friendly units: Sensor or Weapon load, endurance, etc. For other Units: Credibility of Information.	

^{*}when applicable.

Table 9: Description of MilAir text field amplifiers.

2.3 Missile Command (MilMissile)

This command is a special application of **MilAir** for missiles. *Instead of setting an icon using main, a predefined "missile" icon is used. Modifiers are then added to the left and right instead of above and below.* Refer to *Chapter 2, Section 4* in APP6-(C) for further information.

2.3.1 Modifiers

Instead of using upper and lower keys to define the modifiers, left and right keys are used to reflect the position of the modifier.

2.3.1.1 left

Value	Glyph	Examples				
air	(A) / ()	A A	A A	A A	A	
anti ballistic	AB	AB	AB	АВ	AB

Table 14: Table for lower values in the MilLand command.

2.4.2 Amplifiers

2.4.2.1 Echelon This amplifier denotes the "level of command" of the symbol (in the case of infantry this usually denotes the size of the unit). Table 15 lists all the options available.

Value	Symbol
team	Ø
squad	•
section	• •
platoon	• • •
company	
battalion	
regiment	
brigade	X
division	XX
corps	XXX
army	XXXX
army group	XXXXX
theatre	XXXXXX
command	+ +

Table 15: Echelon levels and corresponding symbols.

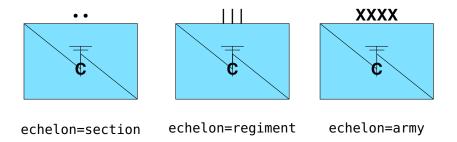

Figure 12: Example of the echelon key in use.

2.4.2.2 Task Force This amplifier denotes a temporary unit for a specific task or objective. If the echelon key is set, it will automatically size to enclose the echelon amplifier.

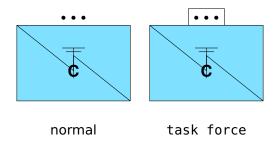

Figure 13: Example of the task force key in use.

2.4.2.3 Status This amplifier denotes the condition of the of the symbol. There are 3 options, reinforced indicates part of another unit is augmenting the capability of this unit, reduced means part of the unit has been detached to augment another unit, and reinforced and reduced means both situations have occurred. If this key is specified, the text field adjacent to it will be shifted right in order to accommodate the amplifier.

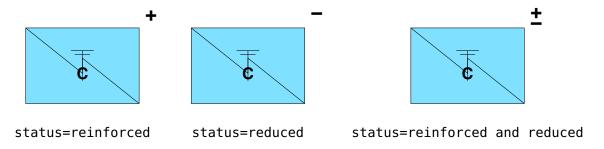

Figure 14: Example of the status key in use.

2.4.2.4 Text Fields MilLand has 14 text field amplifiers, as shown in Figure 18. Some of these amplifiers are placed adjacent to each other, spaces are not automatically inserted between them. Table 16 gives the key and description of each field, along with the standard prefixes to use. This table is mostly identical to the one found in APP6-(C).

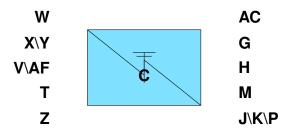

Figure 15: Location of Milland text field amplifiers.

Y location Latitude and longitude; grid coordinates.	9 5,515

AF	common identifier	Example: Paladin for the M109A6 howitzer or Leopard for the KPz-70 tank. (Use NATO code name for hostile common identifiers.)
Z	speed	Displays speed in nautical miles per hour or kilometres per hour.

Table 16: Description of MilLand text field amplifiers.

2.4.3 Supply Icons

An additional set of fullframe Milland icons are used to denote classes of supply. MilSymb uses an additional supply key to construct these icons, which takes up to two values each enclosed in curly braces. If only one value is used, then there must be a set of empty curly braces ({}) after the first value. Each value is a supply class number, as listed in Table 17. The US uses different symbols and designations for their supply classes, their supply class numbers are prefixed with US (including the space). When one value is set, the symbol from the table will be used, and when two values are set, the roman numeral for the supply class is used, with an ampersand (&) inserted between the numerals. This key should be used in place of the main key.

Value	Roman Numeral	Glyph		Exam	ples	
all*	N/A	(ĀLĪ)	ALL	ALL	ALL	ALL
	I		NATO Supp	ly Classes		
1	I	(<u> </u>)	1		1	I
2	II		II		II	II
3	III	()	7	Ÿ	7	Y
4	IV	(IV)	IV	IV	IV	IV
5	V	(

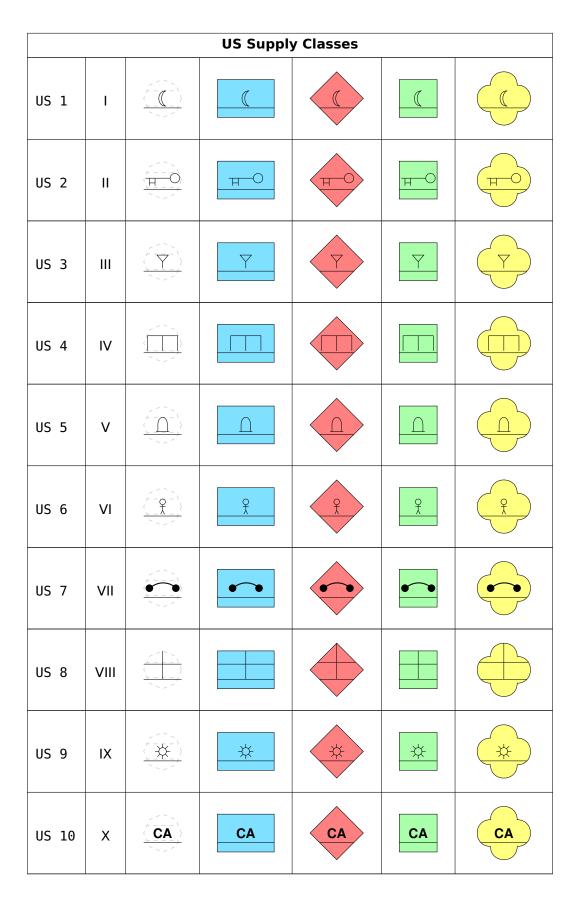

Table 17: Table of Supply Icons.

^{*}can only be used as a single value.

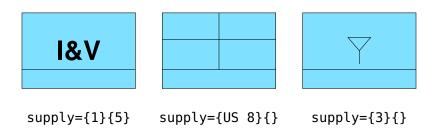

Figure 16: Example of Supply symbols.

2.4.4 Altitude Modifier

Milland defines a special lower modifier for altitude, which takes up to two values each enclosed in curly braces. *If only one value is used, then there must be a set of empty curly braces* ({}) after the first value. Each value is an altitude designation, high (HA), medium (MA) and low (LA), which inserts the acronym. Having two values will insert a slash (/) between them and removes the "A" suffix from the first acronym. This key should be used in place of the lower key.

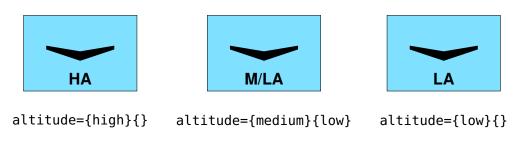

Figure 17: Example of the altitude key in use.

2.5 Equipment Command (MilEquipment)

This command covers symbols for land equipment. The are no upper and lower keys, instead a mobility key sets a modifier to be displayed below the frame (or when the no frame key is set, adjacent to the bottom of the icon). This command also accepts the no frame key. See Chapter 3, Section 3 in APP6-(C).

2.5.2 Amplifiers

2.5.2.1 Text Fields MilEquipment has 16 text field amplifiers, as shown in Figure 18. Some of these amplifiers are placed adjacent to each other, spaces are not automatically inserted between them. Table 20 gives the key and description of each field, along with the standard prefixes to use. This table is mostly identical to the one found in APP6-(C).

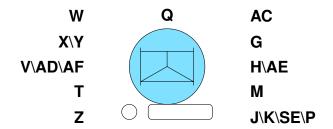

Figure 18: Location of MilEquipment text field amplifiers.

Location	Key	Description
Q	quantity	Identifies the number of items present.
AC	country indicator	A three-letter code that indicates the country of origin of the unit (STANAG 1059). In stability activities, this field can be used for factions or groups.
G	staff comments	Free text. Can be used by staff for information required by commander.
Н	additional information	Free Text.
М	higher formation	Number or title of higher echelon command of unit being displayed.

J	evaluation rating	Degree of confidence that may be placed on the information represented by the symbol. It is shown as one letter and one number made up of Reliability of Source and Credibility of Information. (STANAG 2511). Reliability of Source:
		A. Completely reliable.
		B. Usually reliable.
		C. Fairly reliable.
		D. Not usually reliable.
		E. Unreliable.
		F. Reliability cannot be judged.
		Credibility of Information:
		Confirmed by other sources.
		2. Probably true.
		3. Possibly true.
		4. Doubtful.
		5. Improbable.
		6. Truth cannot be judged.
K	combat effectiveness	Effectiveness of unit or equipment displayed.
		1. Fully operational.
		2. Substantially operational.
		3. Marginally operational.
		4. Not operational.
SE	signature equipment	Identifies a detectable electronic signature "!" for hostile equipment.
Р	identification	Identification modes and codes.
Т	unique designation	An alphanumeric designator that uniquely identifies a particular model of equipment (number).
V	type of equipment	Identifies unique designation (such as AH-64 for attack helicopter).
W	date-time group	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYY) or "O/O" for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by two digits. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. The last two digits of the year are after the month. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.
X	altitude value	Altitude as displayed on the global positioning system
Y	location	(GPS). Latitude and longitude; grid coordinates.
AF	common identifier	Example: Paladin for the M109A6 howitzer or Leopard
		for the KPz-70 tank. (Use NATO code name for hostile common identifiers.)

Z	speed	Displays speed in nautical miles per hour or kilometres
		per hour.
AD	platform type	Electronic intelligence notation (ELNOT) or communications intelligence notation (CENOT).
AE	equipment teardown time	Equipment teardown time in minutes.

Table 20: Description of **MilLand** text field amplifiers.

2.6 Installation Command (MilInstallation)

This command covers symbols for land installations, sites that incorporate permanent, semi-permanent, and temporary structures. *The lower key is not used as there are no lower modifiers.* See *Chapter 3, Section 4* in APP6-(C).

2.6.1 Icons and Modifiers

Table 26: Table for lower values in the MilSeaSurface command.

2.7.2 Amplifiers

2.7.2.1 Text Fields MilSeaSurface has 6 text field amplifiers, as shown in Figure 20. *Some of these amplifiers are placed adjacent to each other, spaces are not automatically inserted between them.* Table 28 gives the key and description of each field, along with the standard prefixes to use. This table is mostly identical to the one found in APP6-(C).

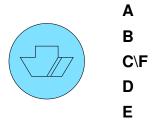

Figure 20: Location of MilSeaSurface text field amplifiers.

Location	Key	Description	Prefix*
Α	track number	System Track Number.	TN
В	name	Ships Name, Hull Number or Task Organization Designator (military only), Mission / International call sign.	
С	position and movement	Course [degrees]/Speed [knots] or Bearing [degrees]/Distance [nautical miles].	C/S, B/D
D	identification	Country of origin (STANAG 1059 - 3-letter code) or Organization (e.g. UN, NATO, EU), Any other information (e.g. IFF / AIS).	
E	additional information	For friendly units: Sensor or Weapon load, endurance, etc. For other Units: Credibility of Information.	
F	date-time group	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYY) or "O/O" for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by two digits. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. The last two digits of the year are after the month. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.	

^{*}when applicable.

Table 28: Description of MilSeaSurface text field amplifiers.

2.8 Own Ship Command (OwnShip)

This command places a marker indicating the position of the vessel the user is on, if they are at sea. No keys are available other than scale. See *Chapter 4, Section 1, Table 4-7* in APP6-(C).

Figure 21: **OwnShip** command symbol.

2.9 Sea Subsurface Command (MilSeaSubsurface)

This command covers symbols for units, equipment, and objects of maritime sub surface operations. See *Chapter 4, Section 2* in APP6-(C).

2.9.1 Icons and Modifiers

2.9.1.1 Main

2.9.2 Amplifiers

2.9.2.1 Text Fields MilSeaSuburface has 6 text field amplifiers, as shown in Figure 22. *Some of these amplifiers are placed adjacent to each other, spaces are not automatically inserted between them.* Table 33 gives the key and description of each field, along with the standard prefixes to use. This table is mostly identical to the one found in APP6-(C).

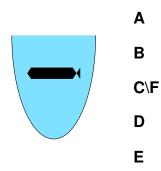

Figure 22: Location of MilSeaSubsurface text field amplifiers.

Location	Key	Description	Prefix*
Α	track number	System Track Number.	TN
В	name	Ships Name, Hull Number or Task Organization Designator (military only), Mission / International call sign.	
С	position and movement	Course [degrees]/Speed [knots] or Bearing [degrees]/Distance [nautical miles] Height [feet/metres].	C/S, B/D
D	identification	Country of origin (STANAG 1059 - 3-letter code) or Organization (e.g. UN, NATO, EU), Any other information (e.g. IFF / AIS).	
E	additional information	For friendly units: Sensor or Weapon load, endurance, etc. For other Units: Credibility of Information. For submarine contacts: Classification:	
		• NONSUB	
		POSSUB LOW 1 or 2	
		• POSSUB HIGH 3 or 4	
		• PROBSUB	
		• CERTSUB	
F	date-time group	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYY) or "O/O" for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by two digits. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. The last two digits of the year are after the month. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.	

^{*}when applicable.

Table 33: Description of MilSeaSubsurface text field amplifiers.

2.10 Sea Mine Command (MilMine)

This command is used to construct sea mine symbols. Instead of using the main key, this command uses the key mine to define the mine type, and the boolean switch neutralised to display the neutralised variant, as shown in Table 34. No modifiers are used. This command also accepts the no frame key. See *Chapter 4*, *Section 2*, *Table 4-17* in APP6-(C).

	(Glyph					
Value	Normal	neutralised	Examples				
free					*	~	
bottomed						T

signals intelligence	()) Si	SI	SI	SI	SI	

Table 37: Table for lower values in the MilSpace command.

2.11.2 Amplifiers

2.11.2.1 Text Fields MilSpace has 5 text field amplifiers, as shown in Figure 23. Some of these amplifiers are placed adjacent to each other, spaces are not automatically inserted between them. Table 39 gives the key and description of each field, along with the standard prefixes to use. This table is mostly identical to the one found in APP6-(C).

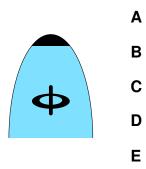

Figure 23: Location of **MilSpace** text field amplifiers.

Location	Key	Description	Prefix*
Α	track number	Space System Track Number.	SSTN
В	name	Space System Name or Mission call sign.	
С	position and movement	Georef Position [degrees]/Inclination] or Trajectory, Height [feet/orbit].	
D	nation	Nation's Name: A 3-letter code indicating the object's country of origin (STANAG 1059).	
E	additional information	For friendly units: Sensor or Weapon load, specific orbit, footprint etc. For other Units: Credibility of Information.	

^{*}when applicable.

Table 39: Description of **MilSpace** text field amplifiers.

2.12 Space Debris Command (MilDebris)

This command is used to construct symbols that represent space debris. No shared keys are used other than scale. This command uses the key size to define the debris size, and the boolean switch man made to display the variant for artificial debris, as shown in Table 40. See *Chapter 5*, *Section 3*, *Table 5-7* in APP6-(C).

	Glyph					
Value	Normal	man made				
small						
medium	0	•				
large						

Table 40: Table of **MilDebris** symbols.

2.13 Activity Command (MilActivity)

This command covers symbols that provide the capability to depict stability activities and civil support activities across the continuum of operations. The lower key is not used as there are no lower modifiers. See Chapter 6 in APP6-(C).

2.13.1 Icons and Modifiers

2.13.1.1 Main

Value	Glyph	Examples				
arrest	()	P	9	P	(1)	
attempted criminal activity	(-1-)	``\\$`.	- P.	,,,,		
automobile	()

rape	() ()	RA	RA	RA	RA
written	() () () () () () () () () ()	W	w w	W	w

Table 42: Table for upper values in the MilActivity command.

2.13.2 Amplifiers

2.13.2.1 Text Fields MilActivity has 6 text field amplifiers, as shown in Figure 24. *Some of these amplifiers are placed adjacent to each other, spaces are not automatically inserted between them.* Table 43 gives the key and description of each field, along with the standard prefixes to use. This table is mostly identical to the one found in APP6-(C).

Figure 24: Location of **MilActivity** text field amplifiers.

Location	Key	Description
AC	country indicator	A three-letter code that indicates the country of origin of the unit (STANAG 1059). In stability activities, this field can be used for factions or groups.
G	staff comments	Free text. Can be used by staff for information required by commander.
Н	additional information	Free Text.
J	evaluation rating	Degree of confidence that may be placed on the information represented by the symbol. It is shown as one letter and one number made up of Reliability of Source and Credibility of Information. (STANAG 2511). Reliability of Source:
		A. Completely reliable.
		B. Usually reliable.
		C. Fairly reliable.
		D. Not usually reliable.
		E. Unreliable.
		F. Reliability cannot be judged.
		Credibility of Information:
		1. Confirmed by other sources
		2. Probably true
		3. Possibly true
		4. Doubtful
		5. Improbable
		6. Truth cannot be judged.
W	date-time group	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYY) or "O/O" for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by two digits. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. The last two digits of the year are after the month. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.
Υ	location	Latitude and longitude; grid coordinates.

Table 43: Description of **MilActivity** text field amplifiers.

3 Custom Icons and Modifiers

3.1 MilSymb TikZ Picture Directory Structure

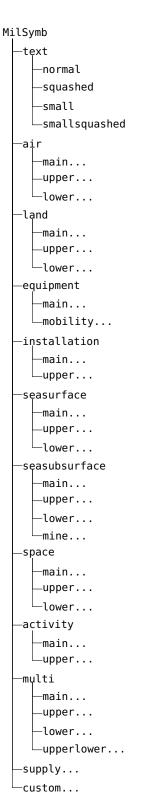

Figure 25: MilSymbTikZ Picture Directory Structure.

To add a custom icon or modifier, create a TikZ .pic in the custom directory using tikzset:

```
\makeatletter %required if using MilSymb@selectedfaction
\tikzset{
MilSymb custom/user icon/.pic={
  custom TikZ drawing commands go here...
```

```
} %comma after bracket is needed if defining multiple .pic.
}
\makeatother %required if using MilSymb@selectedfaction
\begin{tikzpicture}
  \MilLand[faction=hostile, main=user icon]
\end{tikzpicture}
```

You can also create your own sub directories, such as custom/land/main/user icon. This is recommended if you want to organise your custom shapes by symbol type and position. To use your icon or modifier in a command, simply use the path as the value for a icon or modifier key \MilLand[faction=friendly, main=path/to/user icon]. The main, upper and lower keys all accept custom values, as well as the left, right and mobility keys where applicable.

3.2 Drawing Bounds

As specified in APP6-(C), most icons and modifiers should fit within a template comprising of a regular octagon exactly **1** unit in width and **1** unit in height (with the exception of *fullframe* icons and a few others). In commands that specify upper and lower modifiers, the **main** icon should not exceed a height of **0.2** units above and below its origin (the two horizontal dotted line in Figure 26). Similarly, the modifiers should also not extend into the area **0.2** units above and below the origin of the **main** icon. The key value faction=none on any **MilSymb**command (apart from OwnShip or MilDebris, which do not have faction keys) will output this template instead of a frame.

Figure 26: Dimensions of the octagon and origins of the icon and modifiers.

For the **MilMissile** command, the template is rotated 90° anticlockwise, and the left and right keys correspond to the upper and lower keys respectively. The mobility origin is located **0.1** units below the south anchor of the frame.

3.3 Border Anchors

MilSymb defines an anchored bounding box named **M** around all frames. This has anchor points identical to the rectangle node in TikZ. These can be used as coordinates for drawing icons and modifiers relative to the edge of the frame.

3.4 Faction Variants

Most *fullframe* icons have slight variations depending on the faction frame that is being used. To facilitate this, you can create a set of four TikZ .pic in faction sub directories, like so:

```
custom/user icon/friendly/.pic
custom/user icon/hostile/.pic
custom/user icon/neutral/.pic
custom/user icon/unknown/.pic
```

3.5 Clipping

For **Milland** symbols, clipping commands are available to trim any icon or modfier to the inside of the frame. Use \clip \clip faction> within the drawing commands to clip anything specified after the command to the frame.

Then, insert /\MilSymb@selectedfaction directly after the path/to/user icon (so it forms path/to/user icon/\MilSymb@selectedfaction). \MilSymb@selectedfaction will be replaced by the name of the faction, and complete the path to the icon.

3.6 Using Existing Icons and Modifiers

To insert an existing icon or modifier into your custom icon use a nested .pic as so: \pic{MilSymb category/position/name}, where command generally refers to the MilSymb command it is used in as displayed in Figure 25, and position refers to . The exceptions are supply, which contains supply icons detailed in 17, text which provides common text templates as detailed in 3.6.1, and multi which is detailed in 3.6.2. mine is also contained in a sub-directory of seasubsurface, instead of its own directory. MilDebris does not use any icons or modifiers, all drawing syntax is contained within the command.

3.6.1 Text Templates

MilSymb uses 4 standard text templates for commonly used text in icons and modifiers. Use regular TikZ text syntax for any variations. You can use them by nesting a .pic as before, but adding ={text to display} as a suffix, as in \pic{MilSymb text/type={text to display}}. Note that conventionally up to 3 characters are designed to be used with normal text, and up to 4 with "squashed" versions, in order to appear similar to APP6-(C)guidelines. Any more characters should use a smaller font.

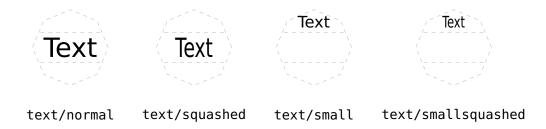

Figure 27: MilSymb text templates.

3.6.2 Multiple Class

Some **MilSymb** icons and modifiers are used in more than one command. In order to avoid code duplication, these are put in their own directory named multi with a single name, even though different aliases may be used in each command. The upperlower sub-directory is used to store modifier glyphs that are used in both the upper and lower positions.

Name	Glyph
multi/lower/pack animal	^
multi/main/ammunition	Ω
multi/main/amphibious	~~~
multi/main/antenna	*
multi/main/armoured	
multi/main/aviation fixed wing	~
multi/main/aviation rotary wing	▶◀
multi/main/bridge	<u> </u>
multi/main/chemical biological radiological nuclear	***

multi/main/civilian unmanned systems	
multi/main/decoy	444
multi/main/diver	
multi/main/drill	V
multi/main/engineer	
multi/main/field artillery	•
multi/main/individual	9
multi/main/killing victim	9
multi/main/maintenance) —(
multi/main/major end	•
multi/main/medic	+
multi/main/medical	
multi/main/medical treatment facility	
multi/main/mine	*
multi/main/missile	
multi/main/naval	Ů.
multi/main/person	9
multi/main/petroleum oil and lubricants	Y
multi/main/psychological operations	4
multi/main/psychological operations filled	=
multi/main/quartermaster	п−О
multi/main/radar	C.
multi/main/repair parts	¤
multi/main/sailing boat	

multi/main/sensor	*
multi/main/signal/friendly	
multi/main/signal/hostile	1
multi/main/signal/neutral	1
multi/main/signal/unknown	
multi/main/transportation	*
multi/main/unmanned systems	~
multi/main/victim of an attempted crime	`
multi/main/water	
multi/main/water purification	
multi/upper/medic	+
multi/upper/naval	ţ
multi/upper/runway	4
multi/upperlower/maintenance	ъ-
multi/upperlower/railroad	∞ ∞

Table 44: Table of Multiple Class Icons and Modifiers.

3.6.3 Hidden Glyphs

There are some .pic that are not used as an icon or modifier directly, but are used to construct other icons or modifiers because they are used multiple times.

Name	Glyph
equipment/main/air defence	
equipment/main/anti tank	
equipment/main/double band	=
equipment/main/high trajectory indirect fire weapons system	

equipment/main/side bands	
equipment/main/single band	_
equipment/main/triple band	=
equipment/main/weapon	
seasubsurface/main/half sea mine	**
seasubsurface/main/sea surface	~~~
supply/medicalbar/friendly	
supply/medicalbar/hostile	
supply/medicalbar/neutral	
supply/medicalbar/unknown	

Table 45: Table of Hidden Glyphs.

4 Examples

5 Control Measures

Control Measures are planned to be included in the next major version of **MilSymb**. Please see the **GitHub** repository for further information.
